

A Single-evaluation score variability

B Single-evaluation comparison variability

C Mean paired contrasts and 95% intervals

D Runtime with diagnostics (median and IQR)

—●— benchmark anchor
 —●— threshold +0.001
 —●— mode0 +0.001
 —●— low threshold stress
—●— threshold -0.001
 —●— mode0 -0.001
 —●— mode1 +0.001
 —●— intermediate stress

A-B: SD of one complete filter evaluation. C: uncertainty of the mean, not single-evaluation variability.
 Largest budget is a finite reference. D includes diagnostics; the first call at each budget/session is excluded.
